

Composed to PDF

This document was not assembled by hand. A specification was decoded, resolved against a theme, lowered into a page tree, and written — the same path a consumer takes.

A [marked paragraph](#), whose mark the theme styles.

Section 1

Vellum decides every line break and every page break in this file. There is no application behind a PDF to lay the text out afterwards, so the positions in the content stream are the positions a reader sees. The breaking is greedy over the opportunities Unicode permits, and the measurement is integer arithmetic from the font's own design units, so the same specification paginates the same way on every machine that renders it.

Section 2

Vellum decides every line break and every page break in this file. There is no application behind a PDF to lay the text out afterwards, so the positions in the content stream are the positions a reader sees. The breaking is greedy over the opportunities Unicode permits, and the measurement is integer arithmetic from the font's own design units, so the same specification paginates the same way on every machine that renders it.

Section 3

Vellum decides every line break and every page break in this file. There is no application behind a PDF to lay the text out afterwards, so the positions in the content stream are the positions a reader sees. The breaking is greedy over the opportunities Unicode permits, and the measurement is integer arithmetic from the font's own design units, so the same specification paginates the same way on every machine that renders it.

Section 4

Vellum decides every line break and every page break in this file. Section 8

Vellum decides every line break and every page break in this file. There is no application behind a PDF to lay the text out afterwards, so the positions in the content stream are the positions a reader sees. The breaking is greedy over the opportunities Unicode permits, and the measurement is integer arithmetic from the font's own design units, so the same specification paginates the same way on every machine that renders it.

Section 9

Vellum decides every line break and every page break in this file. There is no application behind a PDF to lay the text out afterwards, so the positions in the content stream are the positions a reader sees. The breaking is greedy over the opportunities Unicode permits, and the measurement is integer arithmetic from the font's own design units, so the same specification paginates the same way on every machine that renders it.

After the break

An explicit page break starts a page even when the one before it had room.
